DETAILED ACTION

Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 2. Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buttridge et al (Buttridge hereinafter, Pub No.: US 2004/0044606) IN VIEW OF Robinson et al (Robinson hereinafter, US PAT: 6978046).

Re claims 1, 2-8. Buttridge further discloses a computerized method for effecting payment by a check, comprising: electronically receiving payment information for a check drawing on a checking account of an account holder, the payment information comprising a date, a payee, a dollar amount, a legal amount, and a signature in response to receiving the payment information (see col.2 paras 0012-0017). Buttridge does not explicitly disclose, retrieving, from a storage location, an image replacement document template associated with the checking account; and generating an image

Art Unit: 3692

replacement document representative of the check by inserting the payment information into respective fields of the image replacement document template. However, Robinson explicitly discloses an image replacement document template, and generating an image replacement document representative of the original document by inserting the information into respective fields of the image replacement document template (i.e., According to the invention, the creation of additional and/or replacement pages is automated so that manual labor and human errors are reduced. In various embodiments of the invention, the automated page creation is provided by automated creation of a template for a page of the existing document, see col.2 lines 50-62, also see the abstract and the summary of the invention, the examiner maintains that Robinson system generates an image replacement document representative of any documents. Thus Robinson replacement image document generator can generate an image replacement document representative of a check). Thus it would have been obvious to one of ordinary skill in the art to combine the teachings of Buttridge and Robinson for users to generate additional and/or replacement pages for an existing document that are visually coherent with the predetermined visual design of the document.

Re claim 9, 10-16. Buttridge further discloses Logic encoded in media for effecting payment by a check, the logic operable to perform the following steps: receive payment information for a check drawing on a checking account of an account holder, the payment information comprising a date, a payee, a dollar amount, a legal amount, and a signature (see col.2 paras 0012-0017). Buttridge does not explicitly disclose retrieve,

Art Unit: 3692

from a storage location, an image replacement document template associated with the checking account in response to receiving the payment information; and generate an image replacement document representative of the check by inserting the payment information into respective fields of the image replacement document template. However, Robinson explicitly discloses an image replacement document template, and generating an image replacement document representative of the original document by inserting the information into respective fields of the image replacement document template (i.e., According to the invention, the creation of additional and/or replacement pages is automated so that manual labor and human errors are reduced. In various embodiments of the invention, the automated page creation is provided by automated creation of a template for a page of the existing document, see col.2 lines 50-62, also see the abstract and the summary of the invention, the examiner maintains that Robinson system generates an image replacement document representative of any documents. Thus Robinson replacement image document generator can generate an image replacement document representative of a check). Thus it would have been obvious to one of ordinary skill in the art to combine the teachings of Buttridge and Robinson for users to generate additional and/or replacement pages for an existing document that are visually coherent with the predetermined visual design of the document.

Re claims 17, 18-21. Buttridge further discloses a computerized method for effecting payment by a check, comprising: generating, on an output device, an electronic image of a check drawing on a checking account of an account holder; receiving payment

information for the check on the output device (see col.3 paras 0031, also see fig.1 element 22). Buttridge does not explicitly disclose generating a snippet of the payment information; and electronically transmitting the snippet to a remote location for generation of an image replacement document representative of the check based on the snippet. However, Robinson explicitly discloses an image replacement document template, and generating an image replacement document representative of the original document by inserting the information into respective fields of the image replacement document template (i.e., According to the invention, the creation of additional and/or replacement pages is automated so that manual labor and human errors are reduced. In various embodiments of the invention, the automated page creation is provided by automated creation of a template for a page of the existing document, see col.2 lines 50-62, also see the abstract and the summary of the invention, the examiner maintains that Robinson system generates an image replacement document representative of any documents. Thus Robinson replacement image document generator can generate an image replacement document representative of a check). Thus it would have been obvious to one of ordinary skill in the art to combine the teachings of Buttridge and Robinson for users to generate additional and/or replacement pages for an existing document that are visually coherent with the predetermined visual design of the document.

Re claims 22, 23-28. Buttridge further discloses Logic encoded in media for effecting payment by a check, the logic operable to perform the following steps: generate an electronic image of a check drawing on a checking account of an account holder on an

output device; receive payment information for the check on the output device (see col.3 paras 0031, also see fig.1 element 22). Buttridge does not explicitly disclose generate a snippet of the payment information; and electronically transmit the snippet to a remote location for generation of an image replacement document representative of the check based on the snippet. However, Robinson explicitly discloses an image replacement document template, and generating an image replacement document representative of the original document by inserting the information into respective fields of the image replacement document template (i.e., According to the invention, the creation of additional and/or replacement pages is automated so that manual labor and human errors are reduced. In various embodiments of the invention, the automated page creation is provided by automated creation of a template for a page of the existing document, see col.2 lines 50-62, also see the abstract and the summary of the invention, the examiner maintains that Robinson system generates an image replacement document representative of any documents. Thus Robinson replacement image document generator can generate an image replacement document representative of a check). Thus it would have been obvious to one of ordinary skill in the art to combine the teachings of Buttridge and Robinson for users to generate additional and/or replacement pages for an existing document that are visually coherent with the predetermined visual design of the document.

Re claims 29, 30-35. Buttridge further discloses a computerized method for effecting payment by a check, comprising: generating, on an output device, an electronic image

Art Unit: 3692

of a check drawing on a checking account of an account holder; receiving payment information for the check on the output device, the payment information comprising a date, a payee, a dollar amount, a legal amount, and a signature (see col.3 paras 0031, also see fig.1 element 22). Buttridge does not explicitly disclose generating a snippet of the payment information; electronically transmitting the snippet to a remote location; electronically receiving the snippet at the remote location; in response to receiving the snippet, retrieving, from a storage location, an image replacement document template associated with the checking account; and generating an image replacement document representative of the check by inserting the payment information from the snippet into respective fields of the image replacement document template. However, Robinson explicitly discloses an image replacement document template, and generating an image replacement document representative of the original document by inserting the information into respective fields of the image replacement document template (i.e., According to the invention, the creation of additional and/or replacement pages is automated so that manual labor and human errors are reduced. In various embodiments of the invention, the automated page creation is provided by automated creation of a template for a page of the existing document, see col.2 lines 50-62, also see the abstract and the summary of the invention, the examiner maintains that Robinson system generates an image replacement document representative of any documents. Thus Robinson replacement image document generator can generate an image replacement document representative of a check). Thus it would have been obvious to one of ordinary skill in the art to combine the teachings of Buttridge and

Application/Control Number: 10/634,635 Page 8

Art Unit: 3692

Robinson for users to generate additional and/or replacement pages for an existing document that are visually coherent with the predetermined visual design of the document.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to OJO O. OYEBISI whose telephone number is (571) 272-8298. The examiner can normally be reached on 8:30A.M-5:30P.M.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, RICHARD E. CHILCOT can be reached on (571)272-6777. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
